

## Jej Krew Presents - Trails of Cold Stream

Trails of Cold Stream is a pack consisting of 30 songs by Nihon Falcom's "Falcom Sound Team jdk" and "Falcom jdk Band." Nihon Falcom has been developing JRPGs since the early 1980s and are known for their two flagship series, "The Legend of Heroes" and "Ys." The Legend of Heroes series is a subseries of the "Dragon Slayer" series, and the "Trails (Kiseki)" series is a spin-off of the "The Legend of Heroes" series.

The Trails games are story-rich turn-based JRPG which currently span across 7 interconnected games within the same universe, with an 8th game coming out in September 2017. The games are currently split into 3 arcs, Liberl (Sky/Sora), Crossbell(Zero/Ao), and Erebonia (Cold Steel/Sen) all of which focus on different regions on the same continent with the events unfolding within a ~3 year timespan. As such, the main focus of this pack is to step songs from the Trails series (and to a lesser extent Ys) in order to diversify the genres of music in the current stamina meta, as well as spread awareness about the games. This readme will serve as a means of sourcing the songs in the pack.
